15 TABLE 40A: ABOUT 977 GENES UP-REGULATED IN STOMACH CANCER

Table 40A fixts about 977 Genes up-recoulded in stomach cancer compared to normal adult tissues. These were selected from 59680 probesets on the Affymetrix/Eos Hu03 GeneChip array such that the ratio of "average" stomach cancer to "average" normal adult tissues was greater than or equal to 2.0. The "average" stomach cancer to the 90th percentile amongst various stomach cancers. The "average" normal adult tissue level was set to the 90th percentile amongst various non-matignant tissues. In order to remove gene-specific background levels of non-specific hybridization, the 15th percentile value amongst various non-matignant tissues was subtracted from both the numerator and the denominator before the ratio was evaluated. 20

TABLE 41A: ABOUT 634 SEQUENCES UP-REGULATED IN STOMACH CANCER
Table 41A lists about 634 genes up-regulated in stomach cancer compared to normal adult issues that are likely to be extracellular or cell-surface proteins. These were selected as for Table 40A and the predicted protein contained a structural domain that is indicative of extracellular localization (e.g. ig. In3, egf, 7tm domains). Predicted protein domains are 10

TABLE 43A: ABOUT 339 GENES UP-REGULATED IN STOMACH CANCER
Table 43A lists about 339 genes up-regulated in stomach cancer compared to normal stomach that are likely to be extracellular or cell-surface proteins. These were selected as for Table 42A and the predicted protein contained a structural domain that is indicative of surface or extracellular localization (e.g. ig. th3, egf. 7tm domains). Predicted protein domains Table 42A and are noted. Picey: ExAccn: UnigenetO: Unigene Title: PSDomain: R1:

TABLE 44A: ABOUT 314 GENES DOWN-REGULATED IN STOMACH CANCER
Table 44A lists about 314 genes significantly down-regulated in stomach cancer compared to normal stomach. These were selected as for Table 42A, except that the numerator and denominator were switched.

TABLE 45A: ABOUT 947 GENES UP-REGULATED IN STOMACH CANCER COMPARED TO NORMAL ADULT TISSUES

Table 45A lists about 947 genes up-regulated in stomach cancer compared to normal adult tissues. These were selected from 59680 probesets on the Aflymetrix/Eos Hu/03

GeneChip array such that the ratio of "average" stomach cancer to "average" normal adult tissues was greater than or equal to 2.5. The "average" stomach cancer level was set to the 90th percentile amongst various non-malignant tissues. In order to remove gene-specific background levets of non-specific hybridization, the 15th percentile value amongst various non-malignant tissues was subtracted from both the numerator and the denominator before the ratio was evaluated.

TABLE 48A: ABOUT 426 GENES UPREGULATED IN MELANOMA RELATIVE TO NORMAL BODY TISSUES
Table 48A lists about 426 genes upregulated in melanoma relative to normal body tissues. These genes were selected from 59680 probesets on the Eos/Affymetrix Hu03 Genechip array. Gene expression data for each probeset obtained from this analysis was expressed as average intensity (AI), a normalized value reflecting the relative level of mRNA expression.

Placy:

Unique Eos probeset identifier number
ExAcon:

Exemplar Accession number, Genbank accession number
UniquenelD:

Uniquene gene title

Uniquene gene title

Rt:

Mean of metanoma Als divided by the mean of normal fissue Als, where the minimum value for the numerator and denominator was set to 1.0

15

Table 49A lists about 1127 genes upregulated in primary melanoma and/or melanoma metastases relative to normal body issues. These genes were selected from 59680 probesets on the Eos/Affymetrix Hu03 Genectip array. Gene expression data for each probeset obtained from this analysis was expressed as average intensity (A), a normalized value reflecting the retative level of mRNA expression.

Pkey:

Unique Eos probeset identifier number

ExAcor:
Exemplar Accession number, Genbank accession number

UnigenelD:
Unigene Tite:
Unique gene title

R1:
Stit percentile of primary melanoma and melanoma metastasis Als divided by the 90th percentile of normal tissue Als

90th percentile of primary melanoma and melanoma metastasis Als divided by the 90th percentile of heart, liver, lung, and kidney Als

10

The 7 digit numbers in this column are Genbank Identifier (GI) numbers. "Dunham, et al." refers to the publication entitled "The DNA sequence of human chromosome 22" Dunham, et al. (1999) Nature 402:489-495. 15 Indicates DNA strand from which exons were predicted. Strand: Nt_position: Indicates nucleotide positions of predicted exons. Nt_position 14260-14537 Pkey 404854 20 7143420 Plus 80014-80401,80593-81125 53526-53628,55755-55920,57530-57757 405506 402474 7547175 Minus 198991-199168,199316-199548 8119067 400750 25 TABLE 51A: ABOUT 453 GENES UPREGULATED IN PRIMARY MELANOMAS RELATIVE TO NORMAL SKIN Table 51A Kas about 453 genes upregulated in primary melanomas relative to normal skin. Cenes were selected from 59680 probesets on the Eos/Alfymetrix Hu/03 Genechip array. Gene expression data for each probeset obtained from this analysis was expressed as average intensity (AI), a normalized value reflecting the relative level of mRNA expression. Unique Eos probeset identifier number 30 Exemplar Accession number, Genbank accession number ExAcon: UnigenelD: Unigene number Unigene gene title Unigene Title: 90th percentile of primary metanoma Als divided by 90th percentile of normal skin Als 90th percentile of primary melanoma Als divided by 90th percentile of normal skin Als, where the 15th percentile of normal tissue Als was subtracted from both R2: 35 the numerator and denominator UnigenelD Hs.30743 Unigene Title preferentially expressed antigen in mela Pkey 452838 ExAccn U65011 14.06 13.64 15.56 11.62 NM_001922 NM_000372 Hs.301865 Hs.2053 dopachrome tautomerase (dopachrome delta tyrosinase (oculocutaneous albinism IA) 430377 40 426555 12.78 BE386801 AI186431 trinucleotide repeat containing 3 prostate differentiation factor 13.80 438549 Hs.21858 Hs 295638 422424 426600 Hs.171014 VGF nerve growth factor inducible 10.14 22,45 glyceraldehyde-3-phosphate dehydrogenase ESTs, Weakly similar to S51797 vasodilat chondroitin sulfate proteoglycan BEHAB/b 7.25 9.62 430822 AJ005371 Hs.248017 8.66 7.87 45 Hs.32399 457211 AW972565 Hs.6194 Hs.82002 438380 T06430 D13168 endothelin receptor type B 7.66 7.38 4.63 9.04 417355 447210 AF035269 AA319146 Hs.17752 Hs.75426 phosphatidylserine-specific phospholipas secretogranin II (chromogranin C) 7.32 4.65 413554 50 415752 BE314524 Hs.78776 putative transmembrane protein 6.46 absent in melanoma 2 7.00 Hs.105115 NM 004833 421508 AW960707 Hs.148324 Hs.181874 ESTs 6.43 6.27 5 92 AF026939 interferon-induced protein with tetratri 426312 small inducible cytokine sublamily A (Cy hexabrachion (tenascin C, cytotactin) 3.70 446921 AB012113 3.92 7.73 55 Hs.289114 429500 X78565 6.04 6.04 X72755 monokine induced by gamma interferon 414812 5.89 452973 H88409 Hs.40527 **FSTs** 5.96 5.72 2.50 5.29 ENSP00000251056*:Plasma membrane calcium 402075 436856 A1469355 Hs.127310 **ESTs** hypothetical protein FLJ12015 5.68 5.62 5.88 6.30 60 AA663372 Hs.169395 425088 AF086120 NM_001394 439310 Hs.102793 ESTs 5.62 5.36 5.36 5.35 5.28 5.23 5.20 5.14 5.09 5.04 4.94 4.88 4.87 4.74 4.74 4.72 4.68 3.30 Hs.2359 dual specificity phosphatase 4 429170 AB000115 AW979187 hypothetical protein, expressed in osteo melanoma differentiation associated prot 4.28 413670 Hs.75470 409512 Hs.293591 65 Homo sapiens cDNA: FLJ22105 fis, clone H 4.64 Hs.27935 hypothetical protein MGC4837 4.31 BF390513 436315 hypothetical protein MGC48370 glycoprotein M6B 442426 AI373062 Hs.332938 4 03 435056 AW023337 Hs.5422 5.52 4.82 Hs.287402 chondroitin 4-sullotransferase 432828 AB042326 70 AI538226 AK000680 Hs.32976 Hs.266175 guarrine nucleotide binding protein 4 phosphoprotein associated with GEMs 430294 431639 4.35 430838 N46664 Hs.169395 Hs.7155 hypothetical protein FLJ12015 ESTs, Moderately similar to 2115357A TYK 3.68 AA737033 414004 gb:Homo sapiens cig33 mRNA, partial sequ fls485 AF026942 AA305159 Hs.17518 6.29 75 Hs.113019 422192 silver (mouse homolog) like 6.00 42020B BE276055 NM_004403 W03476 deafness, autosomal dominant 5 hypothetical protein MGC4595 446006 Hs.13530 9.85 5.75 Hs.266331 440065 421574 440274 AJ000152 R24595 Hs.105924 defensin, beta 2 80 Hs.7122 scrapie responsive protein 1 2.78 AA431323 N88802 Hs.42146 Hs.5422 417166 **ESTs** 4.29

TABLE 52A: ABOUT 204 GENES UPREGULATED IN PRIMARY MELANOMAS RELATIVE TO MELANOMA METASTASES
Table 52A fists about 204 genes upregutated in primary metanomas relative to melanoma metastases. Genes were selected from 59680 probesets on the Eos/Affymetrix Hu03
Genechip array. Gene expression data for each probeset obtained from this analysis was expressed as average intensity (AI), a normalized value reflecting the relative level of mRNA expression.

Pkey:

ExAcon:

Unique Eos probeset identifier number

Exemplar Accession number, Genbank accession number

Uniquenel Title:

Unique Eos probeset identifier number

Uniquenel Title:

Unique Eos probeset identifier number

Uniquenel Title:

Vingene number

Uniquenel Title:

90th percentile of primary metanoma Als divided by the 90th percentile of metanoma metastasis Als, where the 15th percentile of normal tissue Als was subtracted from both the numerator and denominator

30	TABLE Pkey:	<b>53C</b> :	Unique number corresponding to an Eos probeset

Sequence source. The 7 digit numbers in this column are Genbank Identifier (GI) numbers. "Dunham, et al." refers to the publication entitled "The DNA sequence of human chromosome 22" Dunham, et al. (1999) Nature 402:489-495. Indicates DNA strand from which exons were predicted. Indicates nucleotide positions of predicted exons. Ref:

TABLE 54A: ABOUT 161 GENES UPREGULATED IN PRIMARY MELANOMAS FROM TUMORS THAT LATER METASTASIZED RELATIVE TO PRIMARY MELANOMAS THAT DID NOT METASTASIZE LATER

Table 54A fisis about 161 genes upregulated in primary metanomas from tumors that later metastasized relative to primary metanomas that did not metastasize later. These genes were selected from 59680 probasets on the Ecos/Affymetrix Hu03 Genechip array. Gene expression data for each probaset obtained from this analysis was expressed as average intensity (Af), a normalized vature reflecting the relative level of mRNA expression.

Pkcy: Unique Ecos probaset identifier number

ExAcon: Exemplar Accession number, Genbank accession number 15

TABLE 55A: ABOUT 201 GENES UPREGULATED IN PRIMARY MELANOMAS FROM TUMORS THAT DID NOT METASTASIZE RELATIVE TO PRIMARY MELANOMAS THAT LATER METASTASIZED 15

LATER METASTASIZEU
Table 55A lists about 201 genes upregulated in primary melanomas from tumors that did not metastasize relative to primary melanomas that metastasized later. Genes were selected from 59880 probesets on the Eos/Affymetrix Hu03 Genechip array. Gene expression data for each probeset obtained from this analysis was expressed as average intensity (AI), a normalized value reflecting the relative lavel of mRNA expression.

Pkey:
Unique Eos probeset identifier number
ExAcon:
Exemplar Accession number, Genbank accession number
Unique Dr. Unique Eos probeset identifier number

20

UnigeneID: Unigene Tide:

R1: R2:

Unigene number
Unigene gene fite
Unigene gene fite
Unigene gene fite
Sun percentile of Als for primary melanomas that did not metastasize divided by the 90th percentile of Als from primary melanomas that metastasized later
Sun percentile of Als for primary melanomas that did not metastasize divided by the 90th percentile of Als from primary melanomas that metastasized later,
where the 15th percentile of normal fissue Als was subtracted from both the numerator and denominator

TABLE 56A: ABOUT 277 GENES UPREGULATED IN MELANOMA METASTASES RELATIVE TO BENIGN NEVI
Table 56A lists about 277 genes upregulated in metanoma metastases relative to benign nevi. Genes were selected from 59680 probesels on the Eos/Aflymetrix Hu03 Genechip
array. Gene expression data for each probesel obtained from this analysis was expressed as average intensity (AI), a normalized value reflecting the relative level of mRNA
expression.

expression.

TABLE SBA: ABOUT 183 GENES UPREGULATED IN MELANOMA METASTASES FROM PATIENTS WITH LIMITED DISEASE RELATIVE TO MELANOMA METASTASES FROM PATIENTS WITH PROGRESSIVE DISEASE
Table SBA fists about 183 genes upregulated in melanoma metastases from patients with limited disease relative to melanoma metastases from patients with progressive disease.

Cenes were selected from 59680 probesets on the Eos/Aflymetrix Hu03 Genechip array. Gene expression data for each probeset obtained from this analysis was expressed as average intensity (A), a normalized value reflecting the relative level of mRNA expression.

Prey:

Linique Eos probeset identifier number

Exacon:

Unique Eos probeset identifier number

Exacon:

Unique Formative Accession number, Genbank accession number

Uniquenel Title:

Uniquene Title:

Uniquene gene title

90th percentile of Als for metastases from patients with firrited disease divided by 90th percentile of Als for metastases from patients with progressive disease where the 15th percentile of normal fissue Als was subtracted from both the numerator and denominator

TABLE 59A: ABOUT 201 GENES UPREGULATED IN MELANOMA METASTASES FROM PATIENTS WITH PROGRESSIVE DISEASE RELATIVE TO MELANOMA METASTASES FROM PATIENTS WITH LIMITED DISEASE

Table 59A lists about 201 genes upregulated in melanoma metastases from patients with progressive disease relative to melanoma metastases from patients with limited disease.

Genes were selected from 59680 probesets on the Eos/Afrymetrix Hur03 Genechip array. Gene expression data for each probeset obtained from this analysis was expressed as average intensity (AI), a normalized value reflecting the relative level of mRNA expression.

Pitey:

Unique Eos probeset identifier number

Exacon:

Unique Eos probeset identifier number

Exemplar Accession number, Genbantk accession number

Uniquene Title:

Uniquene gene title

R1:

90th percentitle of Als for metastases from patients with progressive disease divided by the 90th percentitle of Als for metastases from patients with limited disease.

R2:

90th percentitle of Als for metastases from patients with progressive disease divided by the 90th percentitle of Als for metastases from patients with limited disease, where the 15th percentitle of normal tissue Als was subtracted from both the numerator and denominator

TABLE 63A: ABOUT 181 GENES UPREGULATED IN BENIGN NEVI RELATIVE TO MELANOMA METASTASES

Table 63A lists about 181 genes upregulated in benign nevi relative to melanoma metastases. Genes were selected from 59680 probesets on the Eos/Alfymetrix Hu03 Genechip array. Gene expression data for each probeset obtained from this analysis was expressed as average intensity (AI), a normalized value reflecting the relative level of mRNA expression.

Pitary: Unique Eos probeset identifier number

ExAcor: Exemplar Accession number, Genbank accession number

UniquenelD: Uniquene unumber

Uniquene gene title

R1 average of benign nervi Als divided by the 90th percentile of melanoma metastasis AIs, where the 15th percentile of normal tissue AIs was subtracted from both the numerator and denominator. 5

10

Unique Eos probeset identifier number
Exemplar Accession number, Genbank accession number
Unigene number
Unigene number
Unigene gene title
average of benign nevi Als divided by the 90th percentile of melanoma metastasis Als
average of benign nevi Als divided by the 90th percentile of melanoma metastasis Als
average of benign nevi Als divided by the 90th percentile of melanoma metastasis Als, where the 15th percentile of normal tissue Als was subtracted from both
the numerator and denominator

TABLE 64A: ABOUT 929 GENES DOWNREGULATED IN PRIMARY MELANOMAS AND/OR MELANOMA METASTASES RELATIVE TO NORMAL SKIN
Table 64A lists about 929 genes downregulated in primary melanomas and/or melanoma metastases relative to normal skin. Genes were selected from 59680 probesets on the
Cos/Affymetrix Hud3 Genechip array. Gene expression data for each probeset obtained from this analysis was expressed as average intensity (AI), a normalized value reflecting the
relative level of mRNA expression.
Pitey:
Unique Eos probeset identifier number
ExAccn:
Exemplar Accession number, Genbank accession number
Unigene Tide:
Unique Tide:
Unique gene title
90th percentile of normal skin Als divided by the 90th percentile of primary melanoma and melanoma metastasis Als
90th percentile of normal skin Als divided by the 90th percentile of primary melanoma and melanoma metastasis Als, where the 15th percentile of normal tissue
Als was subtracted from both the numerator and denominator 35

TABLE 55A: ABOUT 838 GENES DOWNREGULATED IN BENIGN NEVI RELATIVE TO NORMAL SKIN
Table 65A lists about 838 genes downregulated in benign nevi relative to normal skin. Genes were selected from 59880 probesets on the Eos/Affymetrix Huti3 Genechip array. Gene
expression data for each probeset obtained from this analysis was expressed as average intensity (AI), a normalized value reflecting the relative level of mRNA expression.

#### WO 03/025138

It is understood that the examples described above in no way serve to limit the true

scope of this invention, but rather are presented for illustrative purposes. All publications,
sequences of accession numbers, and patent applications cited in this specification are herein
incorporated by reference as if each individual publication or patent application were
specifically and individually indicated to be incorporated by reference.

## WHAT IS CLAIMED IS:

1	1.	A method for determining the presence or absence of a pathological cell in a
2	patient, said n	nethod comprising detecting a nucleic acid comprising a sequence at least 80%
3	identical to a	sequence as described in Tables 2A-68 in a biological sample from said patient,
4	thereby deterr	nining the presence or absence of said pathological cell.
1	2.	The method of Claim 1, wherein:
2	a) said	d pathology is described in Table 1, including a cancer; and/or
3	b) sai	d biological sample comprises isolated nucleic acids.
1	3.	The method of Claim 1, wherein said biological sample is tissue from an organ
2	which is affect	eted by said pathology of Table 1, including a cancer.
1	4.	The method of Claim 2, wherein said nucleic acids are mRNA
1	5.	The method of Claim 2:
2	a) fur	ther comprising a step of amplifying nucleic acids before said step of detecting
3	sa	id nucleic acid; or
4	b) wh	nere said detecting is of a protein encoded by said nucleic acid.
1	6.	The method of Claim 1, wherein said nucleic acid comprises a sequence as
2	described in	Γables 2A-68.
1	7.	The method of Claim 2, wherein:
2	a) sai	d detecting step is carried out by:
3	i)	using a labeled nucleic acid probe;
4	ii)	utilizing a biochip comprising a sequence at least 80% identical to a sequence
5		as described in Tables 2A-68, Sir
6	iii	detecting a polypeptide encoded by said nucleic acid; or
7	b) sa	id patient is:
8	i)	undergoing a therapeutic regimen to treat said pathology of Table 1; or
9	ii	is suspected of having said pathology or cancer.
1	8.	An isolated nucleic acid molecule comprising a sequence as described in
2	Tables 2A-68	3. ·

PCT/US02/29560

9. 1 The nucleic acid molecule of Claim 8, which is labeled. 1 10. An expression vector comprising the nucleic acid of Claim 8. 1 11. A host cell comprising the expression vector of Claim 10. 1 12. An isolated polypeptide which is encoded by a nucleic acid molecule 2 comprising a sequence as described in Tables 2A-68. 1 ·13. An antibody that specifically binds a polypeptide of Claim 12. 14. The antibody of Claim 13: 1 2 a) conjugated to an effector component; 3 b) conjugated to a detectable label, including a fluorescent label, a radioisotope, or a 4 cytotoxic chemical; 5 c) which is an antibody fragment; or 6 d) which is a humanized antibody. 1 A method for specifically targeting a compound to a pathological cell in a 2 patient, said method comprising administering to said patient an antibody of Claim 13, 3 thereby providing said targetting. 1 16. A method for determining the presence or absence of a pathological cell in a 2 patient, said method comprising contacting a biological sample with an antibody of Claim 13. 1 17. The method of Claim 16, wherein: 2 a) said antibody is conjugated to: 3 i) an effector component; or 4 ii) a fluorescent label; or

b) said biological sample is a blood, serum, urine, or stool sample.

3 a) contacting said compound with a pathology-associated polypeptide, said 4 polypeptide encoded by a polynucleotide that selectively hybridizes to a sequence 5 at least 80% identical to a sequence as described in Tables 2A-68; and 6 b) determining the functional effect of said compound upon said polypeptide. 1 19. A drug screening assay comprising the steps of: 2 a) administering a test compound to a mammal having a pathology of Table 1 or a 3 cell isolated therefrom; and 4 b) comparing the level of gene expression of a polynucleotide that selectively 5 hybridizes to a sequence at least 80% identical to a sequence as described in 6 Tables 2A-68 in a treated cell or mammal with the level of gene expression of said 7 polynucleotide in a control cell or mammal, wherein a test compound that 8 modulates said level of expression of the polynucleotide is a candidate for the 9 treatment of said pathology. 10

(54) Title: METHODS OF DIAGNOSIS OF CANCER COMPOSITIONS AND METHODS OF SCREENING FOR MODULATORS OF CANCER

(57) Abstract: Described herein are genes whose expression are up-regulated or down-regulated in specific cancers. Related methods and compositions that can be used for diagnosis and treatment of those cancers are disclosed. Also described herein are methods that can be used to identify modulators of selected cancers.

## INTERNATIONAL SEARCH REPORT

International application No.

PCT/US02/29560

Box I Observations where certain claims were found unsearchable (Continuation of Item 1 of first sheet)
This international report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:
Claim Nos.:     because they relate to subject matter not required to be searched by this Authority, namely:
Claim Nos.:     because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:
Claim Nos.:  because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).
Box II Observations where unity of invention is lacking (Continuation of Item 2 of first sheet)
This International Searching Authority found multiple inventions in this international application, as follows: Please See Continuation Sheet x
1. As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.  2. As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.  3. As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:
No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.: 1-7 for Specie A(hemangiomas) and B (SEQ ID NO: 1)  Remark on Protest  The additional search fees were accompanied by the applicant's protest.  No protest accompanied the payment of additional search fees.

Form PCT/ISA/210 (continuation of first sheet(1)) (July 1998)

International application No.

PCT/US02/29560

This application contains the following inventions or groups of inventions, which are not so linked as to form a single general inventive concept under PCT Rule 13.1. In order for all inventions to be searched, the appropriate additional examination fees must be paid.

Groups 1-104,648, claim(s) 1-7, drawn to a method for determining the presence or absence of a pathological (Specie A) cell in a patient via detection of polynucleotides that are at least 80% identical to listed sequences (Specie B). If electing from this Group Set, Applicants are asked to elect one species from A and B. Species A has 254 possibilities (see Table 1). Please note that the sequences in Tables 2A-68 are unsearchable as they are not included in the Sequence Listing. Applicants have supplied 412 nucleic acid sequences from which a selection can be made for Specie B. The total number of individual inventions in this Group Set including all possible combinations of Species A and B is 104,648.

Groups 104,649-105,060, claim(s) 8-12, drawn to an isolated nucleic acid molecules from Tables 2A-68, expression vectors, host cells, and polypeptides encoded by nucleic acid molecules with listed sequences from Tables 2A-68 (Species B). If electing from this Group Set, Applicants are asked to elect one species from Species B. Please note that the sequences in Tables 2A-68 are unsearchable as they are not included in the Sequence Listing. Applicants have supplied 412 nucleic acid sequences from which a selection can be made for Specie B. The total number of individual inventions possible in this Group Set with Specie B is 412.

Groups 105,061-105,472, claim(s) 13-14, drawn to an antibody that binds to a polypeptide encoded by a polynucleotide with sequences from Tables 2A-68 (Species B). If electing from this Group Set, Applicants are asked to elect one species from Species B. Please note that the sequences in Tables 2A-68 are unsearchable as they are not included in the Sequence Listing. Applicants have supplied 412 nucleic acid sequences from which a selection can be made for Specie B. The total number of individual inventions possible in this Group Set with Specie B is 412.

Groups 105,473-105,884, claim(s) 15, drawn to a method for targeting a compound to a pathological cell in a patient via administering an antibody that binds to a polypeptide encoded by a polynucleotide from Tables 2A-68 (Species B). If electing from this Group Set, Applicants are asked to elect one species from Species B. Please note that the sequences in Tables 2A-68 are unsearchable as they are not included in the Sequence Listing. Applicants have supplied 412 nucleic acid sequences from which a selection can be made for Specie B. The total number of individual inventions possible in this Group Set with Specie B is 412.

Groups 105,885-106,296, claim(s) 16-17, drawn to a method for determining the presence or absence of a pathological cell in a patient via contacting the sample with an antibody that binds to a polypeptide encoded by a polynucleotide from Tables 2A-68 (Species B). If electing from this Group Set, Applicants are asked to elect one species from Species B. Please note that the sequences in Tables 2A-68 are unsearchable as they are not included in the Sequence Listing. Applicants have supplied 412 nucleic acid sequences from which a selection can be made for Specie B. The total number of individual inventions possible in this Group Set with Specie B is 412.

Groups 106,297-106,708, claim(s) 18, drawn to a method for identifying a compound that modulates a pathology-associated polypeptide encoded by a polynucleotide that hybridizes to a sequence in Tables 2A-68 (Species B). If electing from this Group Set, Applicants are asked to elect one species from Species B. Please note that the sequences in Tables 2A-68 are unsearchable as they are not included in the Sequence Listing. Applicants have supplied 412 nucleic acid sequences from which a selection can be made for Specie B. The total number of individual inventions possible in this Group Set with Specie B is 412.

Groups 106,709-211,356, claim(s) 19, drawn to drug screening assay by administering a compound to a mammal or cell having a pathology (of Table 1) and comparing the level of gene expression of a polynucleotide that hybridizes to a sequence that is 80% identical to sequences as described in Tables 2A-68 (Species B) to gene expression in control cells or mammals. If electing from this Group Set, Applicants are asked to elect one species from A and B. Species A has 254 possibilities (see Table 1). Please note that the sequences in Tables 2A-68 are unsearchable as they are not included in the Sequence Listing. Applicants have supplied 412 nucleic acid sequences from which a selection can be made for Specie B. The total number of individual inventions in this Group Set including all possible combinations of Species A and B is 104,648.

This International Searching Authority considers that the international application does not comply with the requirements of unity of invention (Rules 13.1, 13.2, and 13.3) for the reasons indicated below:

The inventions listed as all Group Sets (Groups 1-211,356) do not relate to a single general inventive concept under PCT Rule 13.1, because under PCT Rule 13.2 they lack the same or corresponding special technical features for the following reasons:

Groups 1-104,648 and Groups 105,472-211,356 are directed to methods or assays which vary in one or more of the following: reactants, steps, and/or goals which are not coextensive and which do not share the same technical feature. Groups 104,649-105,472 have two separate special technical features, a nucleic acid and an antibody, respectively. These are directed to different chemical entity types regarding the critical limitations featuring different structures and functions. The antibodies undergo recognition and binding reactions

And the state of the state of the state of the state of the state of the state of the state of the state of the

INTERNATIONAL SEARCH REPORT

International application No.

PCT/US02/29560

wherein what is bound is different from what is bound by the compositions including the nucleic acids. Thus, in summary, each Group is directed to a different special technical feature and thus supports this lack of unity.

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In order for more than one species to be examined, the appropriate additional examination fees must be paid. The species are as follows:

The claims in the Groups 1-104,648 and 106,709-211,356 include a series of species A directed to different pathologies which are listed in Table 1. Each of these types of pathologies are separate entities which affect patients differently, meaning each has its own special technical feature.

The claims in all Groups (1-211,356) include a series of species B directed to nucleic acid sequence listed (412 possibilities) which are considered separate as each defines its own special technical feature.

The first listed pathology (Specie A) and SBQ ID NO: 1 (Species B) will be automatically searched. For each additional Group with a specie combination elected, the fee is an additional \$210.00.
